SUMMARY

AI engineer who ships full products, not just models — architecture, backend, and deployment included. Built ErgoFit's real-time posture-coaching pipeline end-to-end (98% detection accuracy) and took it live; currently building JobPilot, an autonomous job-application agent. Comfortable moving across computer vision, LLMs/RAG, and the infrastructure that gets them into production.

EDUCATION

EPI International Multidisciplinary School — Sousse, Tunisia
Engineering Degree in Artificial Intelligence & Data Science — *Sep 2021 – Sep 2026*

TECHNICAL SKILLS

Generative AI & LLMs: LLMs, LangGraph, Agents, RAG, Prompt Engineering, Embeddings, LangChain, Hallucination Analysis
Machine Learning: Transformers, CNNs, Scikit-Learn, XGBoost, Random Forest, TensorFlow/Keras, PyTorch
Computer Vision: YOLO (v8/v11), OpenCV, MediaPipe, ResNet, Image Classification, SAHI, Object Detection
Backend, MLOps & Systems: FastAPI, Node.js, PostgreSQL, Apache Spark (PySpark), Docker, CI/CD, GitHub Actions, Git, Streamlit, Blockchain
Web & Infrastructure: Next.js, React, Tailwind CSS, Vercel (Edge Network), DNS Management, Google Tag Manager, Technical SEO
Programming: Python, C++, JavaScript/TypeScript, Bash, SQL

PROFESSIONAL EXPERIENCE

Freelance Full-Stack & Infrastructure Engineer — Remote, Quebec, Canada
Clés Auto + (Client Project) — *Oct 2026 – Nov 2026*

- Built and launched clesautoplus.ca, a mobile-first Next.js/Tailwind CSS platform for a 24/7 emergency automotive locksmith, focused on technical SEO and conversion tracking.
- Migrated DNS from a legacy Yellow Pages/Wix setup to Vercel's Anycast edge network with zero downtime, replacing failing registrar redirects with edge-level HTTP 308 redirects to preserve 100% of the legacy domain's SEO authority.
- Integrated Google Tag Manager in the Next.js document head to track Meta Ads conversions without hydration conflicts.

AI Engineering Intern — Tunis, Tunisia
Tunisie Telecom — *Feb 2026 – Jul 2026*

- Built ErgoFit's real-time posture pipeline — MediaPipe pose landmarks feeding a Random Forest classifier at 98% detection accuracy.
- Shipped "ErgoCoach," a RAG assistant that grounds advice in a user's own error history and certified ergonomic guides, so it doesn't hallucinate medical-sounding advice.
- Automated weekly progress reports with a scheduled agent that reads database trends and emails each user their own insights.
- Deployed the whole stack myself — Node.js/FastAPI, Dockerized, CI/CD via GitHub Actions — live at ergofit.live.

Software Development Intern — Remote, Switzerland
Business Scalable — *Jul 2025 – Aug 2025*

- Built and deployed RAG chatbots (LangChain, Gemini/OpenAI) that cut support response time and manual ticket load.
- Built data pipelines connecting REST APIs to backend systems for real-time processing.
- Documented model performance and helped streamline the team's Docker/CI-CD deployment process.

PROJECTS

JobPilot: Autonomous Agentic SaaS | ***Python, LangGraph, FastAPI, Whisper*** Aug 2026 – Present

- Building an agent that parses a resume and target job descriptions, then applies to matching roles on the user's behalf — cutting manual job-hunting time.
- Building a fully spoken mock-interview agent: OpenAI Whisper for listening, TTS for responding, so it feels like talking to an actual interviewer.
- Orchestrating the multi-agent application logic in LangGraph behind a FastAPI backend serving the dashboard.

Secure Brain Tumor Classification (NeuroChain) | ***TensorFlow, Blockchain*** Nov 2025 – Jan 2026

- Paired a CNN tumor classifier (TensorFlow/Keras) with "NeuroChain," a SHA-256 blockchain ledger that flags any tampered patient record, in a Streamlit app for doctors to review MRI scans.

Full-Stack Generative AI Agent for E-Commerce | ***Python, Gemini, RAG*** Nov 2025 – Dec 2025

- Built a Gemini-powered agent with RAG over ERP data for real-time inventory queries and order tracking, keeping responses grounded instead of hallucinated.

Also shipped: a PySpark fraud-detection pipeline over 1M+ transactions (98.8% recall, AUC $>$ 0.99 with a weighted GBT model) and a YOLOv11 object detector fine-tuned on BDD100K for autonomous-driving perception.

CERTIFICATIONS

Machine Learning Specialization — DeepLearning.AI (Mar 2026) | **Building Transformer-Based NLP Applications** — NVIDIA (Feb 2026)

Generative AI: Prompt Engineering Basics — IBM (Mar 2026) | **Building RAG Agents with LLMs** — NVIDIA (Nov 2025)

Fundamentals of Deep Learning — NVIDIA (Nov 2025) | **Foundations of Data Science** — Google (Jan 2026)
